

INDUSTRY INFORMATIVE NETWORK - IIN

The **Industry Informative Network** is a European platform for discussion, a tool to boost dialogue among **cold chain** operators and stakeholders. It was conceived as a **technical repository** to bridge the gap between market supply and demand when it comes to **energy efficiency**.

The IIN aims to **increase energy culture** of industrial food companies, warehouse, cold storage and logistic operators, and create the opportunity to improve their core business by improving sustainable supply-chain initiatives. Stakeholders can thus create a community contributing to the Catalogue of Innovation:

- Exchange **Technology Offers** (introducing an energy efficiency solution applicable to the cold chain).
- Share a **Technology Demand** (if they are seeking for best practices to face energy efficiency challenges).
